The underlying infrastructure of the Metaverse Network

Create the next generation of immersive and orderly metaverse civilization Internet,  
allowing human beings to enjoy the fun of science and technology

2022

# The various stages of the blockchain industry

## Research stage 2008 - 2009

On October 31, 2008, Satoshi Nakamoto released the Bitcoin white paper, which is regarded as the official birth of Bitcoin. On January 3, 2009, the Bitcoin system appeared in the form of its genesis block, sparking a wave of heated discussions around the world.

## Nurture stage 2013 - 2015

After a large-scale discussion around the world, Vitalik, the founder of Ethereum, released the white paper of the first version of Ethereum in late 2013. At the time, the price of Bitcoin was around \$1,200. In 2014, Ethereum started a pre-sale and successfully raised 31,531 bitcoins.

# Progression stage

## Initial stage 2010 - 2012

The first Bitcoin exchange "Bitcoinmarket.com" was born on March 17, 2010. At the time, the price of Bitcoin was \$0.003. The first Bitcoin payment transaction occurred on May 22, when someone exchanged 10,000 Bitcoins for 2 pizzas.

## Become mainstream 2016 - 2018

During this period, Ethereum set off an ICO frenzy, which also brought BTC to an all-time high of \$20,000. ETH also hit \$1,500, an increase of about 3,700 times. Other blockchain applications also showed outstanding performance.

# The various stages of the blockchain industry

## Global adoption

2019-2021

Over time, the impact of blockchain on all areas of society and the economy has become more apparent. Cryptocurrencies have become one of the mainstream currencies in the world, causing major changes in the global economy. With the rise of DeFi and other products, this is also the best time for individual investors or businesses looking to get involved in blockchain and cryptocurrencies. During this period, various NFT products and digital assets (such as BTC) were reserved as strategic funds by global multinational banks and investment institutions, making digital assets a mainstream financial investment product.

## The final stage of blockchain - the Metaverse

2021 - 2030

After the rapid development of the NFT industry, blockchain technology has ushered in a major breakthrough in the financial field, creating a large-scale alternative business ecosystem - Wikimeta DAO through blockchain technology.

The Metaverse will revolutionize our economy and is widely regarded as the ultimate form of blockchain development. All the big names and top names in the industry have made plans to enter this new market to fully participate in the new revolutionary age of the Metaverse.

# Metaverse trends

- The metaverse is defined as a collective virtual space created by the fusion of physical reality and virtual space, powered by augmented reality (AR) and the Internet.
- It could fundamentally change the way we interact with the digital world, opening up new opportunities for creators, gamers and artists, and potentially shaping a trillion-dollar industry.
- Mainstream companies such as Google, Microsoft, Samsung and Sony have been trying to enter the industry, aiming to get a piece of the "extended reality" of the future.
- A growing number of cryptocurrency projects, such as Decentraland, combine the concepts of virtual worlds and cryptocurrencies to develop a metaverse that integrates cryptocurrencies with many applications, products, and services.
- Meta (Facebook) CEO - Mark Zuckerberg: "The Metaverse will bring enormous opportunities to individual creators and artists, or the more limited educators and entertainment workers. An achievable metaverse could be Second only to a functioning teleportation device."

introduce

## Mainstream institutions entering the NFT and Metaverse

Currently, big brands from different industries are getting involved in NFTs and the Metaverse, and some of the institutions that have joined the Metaverse include those in gaming, fashion and entertainment:

### Gucci

In partnership with Roblox, a virtual "Gucci Garden" was created in the game, and a limited-edition virtual pack priced at \$4,100 was released.

### Burberry

The first series of NFTs will be launched through a partnership with Blankos Block Party, offering NFT characters and accessories.

### Louis Vuitton

Will be giving away its NFTs to Louis the Game players, a new game designed to celebrate the company's 200th anniversary.

## The underlying infrastructure of the Metaverse Network

Wikimeta DAO is a decentralized world-building platform that allows people to build, play, and interact in a vast world with unlimited opportunities to create captivating experiences. Wikimeta DAO aims to combine the scarcity, immutability and liquidity characteristics of NFTs to contribute to the development of a whole new metaverse. Users can buy and collect exclusive NFTs for trading, gaming, etc. within the platform.

The Wikimeta DAO platform will include everything related to NFTs, Virtual Reality (VR) and more. NFTs purchased by users can be used for games on the platform, while ambitious traders can also use WKM tokens to participate in liquidity mining to unlock rare NFTs not found elsewhere.

Wikimeta DAO will become one of the leading brands in the field of virtual reality, giving users unprecedented freedom to explore new areas. Here, users can use the latest technology to socialize, play games, and cultivate a new market with millions of users.

## Difficulties in Metaverse Realization

Identity protection, privacy and data security, immersive low latency, high monopoly, interactive social relationship between the real world and the metaverse, economic system and order civilization.

# Wikimeta DAO

## Metaverse Advanced Technology

-  Distributed Edge Computing
-  Multi-layer perfect sharding technology
-  State channel lightning network efficiently handles tps
-  Multi-API language interface, virtual machine compatible with public chain ecology such as Ethereum Polkadot, unlimited import of traffic
-  XR true Internet, brain-computer interface transmits information to build Metaverse Civilization 4.0
-  Technology Transcendence - Distributed edge computing, high compatibility of multi-language interfaces, diversion of mainstream public chains ETH, DOT, AVAX, etc.
-  The underlying smart contract open protocol of the security architecture breaks the impossible triangle of the blockchain
-  Privacy Proof
-  Oracle

# The underlying infrastructure of the Metaverse Network

## Exclusive NFT

Unique and rare NFTs only on the Wikimeta DAO platform

## Fair Liquidity Mining

Fair mining mechanism to reward users who use NFT to provide liquidity

## NFT trading with liquidity

Proprietary liquidity matching engine that leverages oracles, on-chain data and price history to provide liquidity-backed price points for all NFTs deployed on the platform

## AI-VR technology

Provide users with practical and fun apps and games powered by artificial intelligence and virtual reality

## Social network

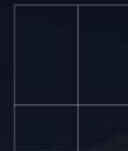

Provide a space for users to meet, interact and participate in online activities together

## Innovative game mechanics

Leverage the platform's RNG-based game mechanics to create fun mini-games and activities

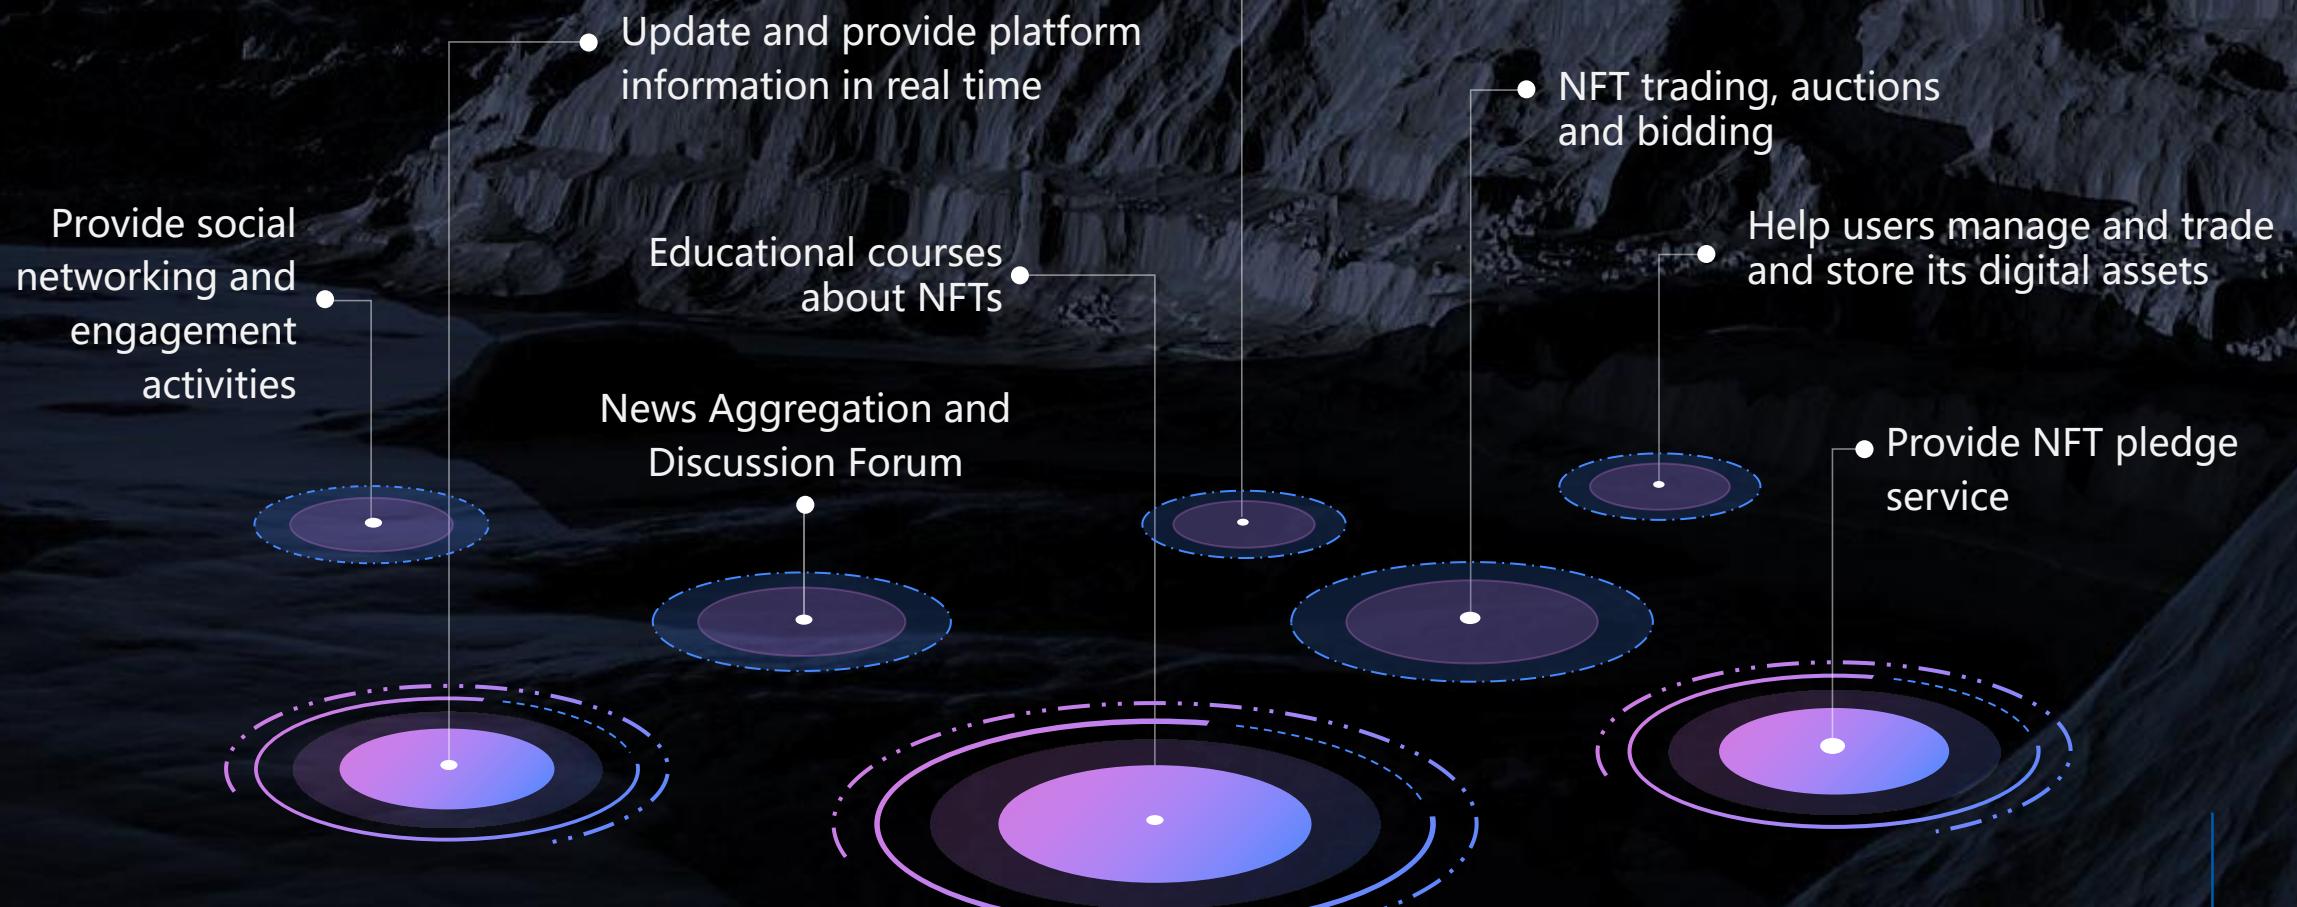

# Game developed by Wikimeta DAO

themed games

# Wikimeta DAO

## Metaverse Social Circle Gathering Center

# Wikimeta DAO Metaverse

## Game Settings: NFT

NFT partners will accompany users in their daily activities around the clock, your favorite and exclusive digital partners are all in the Wikimeta DAO metaverse

**Special function** Each partner has super special functions to enrich the user's experience in the metaverse.

**Clearance mission** By completing buddy missions, users will have the opportunity to level up their buddies.

**Free trade** Users can freely buy and sell NFT partners in the market, and can also have multiple NFT partners at the same time.

**No storyline** The game experience is unlimited, free to play, and each player can create his own story.

**Personalized clearance missions** All users can participate in unique and customizable missions and earn exclusive rewards for completing them.

**Fully immersive experience** WikimetaDAO will soon launch Hapticsuits to provide users with the best haptic experience.

**Land development tool** A Scriptingsystem will be developed to allow users to develop and build their own land.

# Wikimeta DAO NFT First NFT Series

## Wikimeta Dao

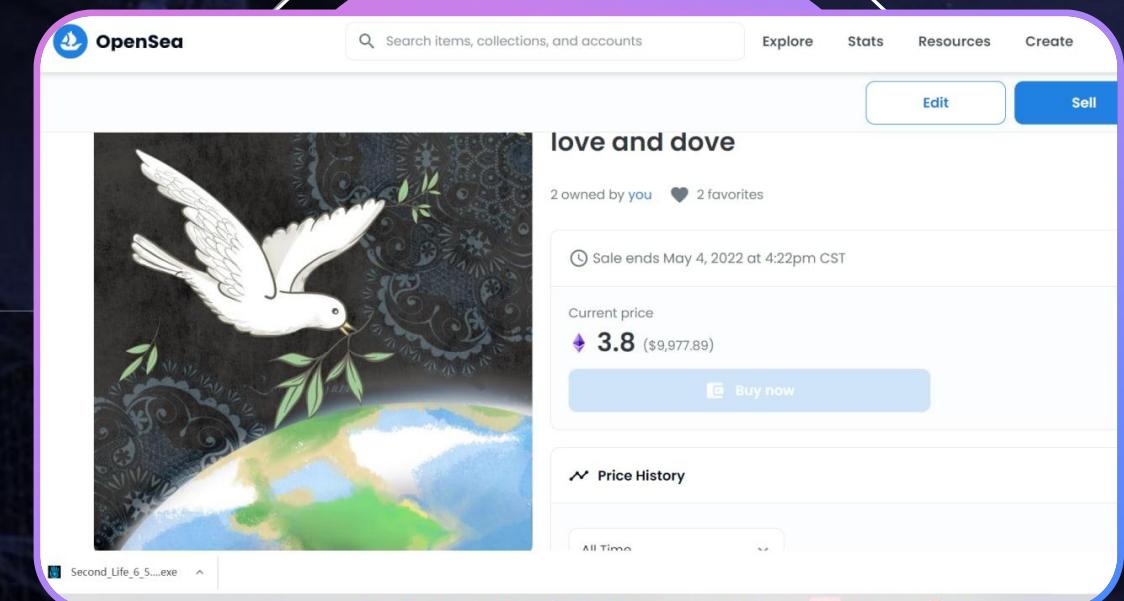

Several different collections of NFT collectibles will be released on the Wikimeta DAO platform. There are multiple types of NFTs that will be issued, and no two NFTs will be the same.

## Wikimeta Dao

The Wikimeta DAO will have collections of NFTs designed by top talent that can be used in the ever-expanding metaverse.

## Wikimeta Dao NFT

233 uniquely generated, cute, collectible peace pigeons, stored on the blockchain with proof of ownership.

# Wikimeta DAO supports important fraternity and peace alliances for a brighter future

- Support a wide range of charities, starting with World Vision.
- Promote the development of the charitable industry, dedicated to helping those in need.
- Collectors can buy NFT collectibles or make donations, and all proceeds will go to different charities.
- Once certain goals are reached, both NFT creators and donated collectors will be rewarded with Wikimeta DAO products.

# Defi3.0 Launches dao fission community

## Ecocoin Airdrop DAO Donors

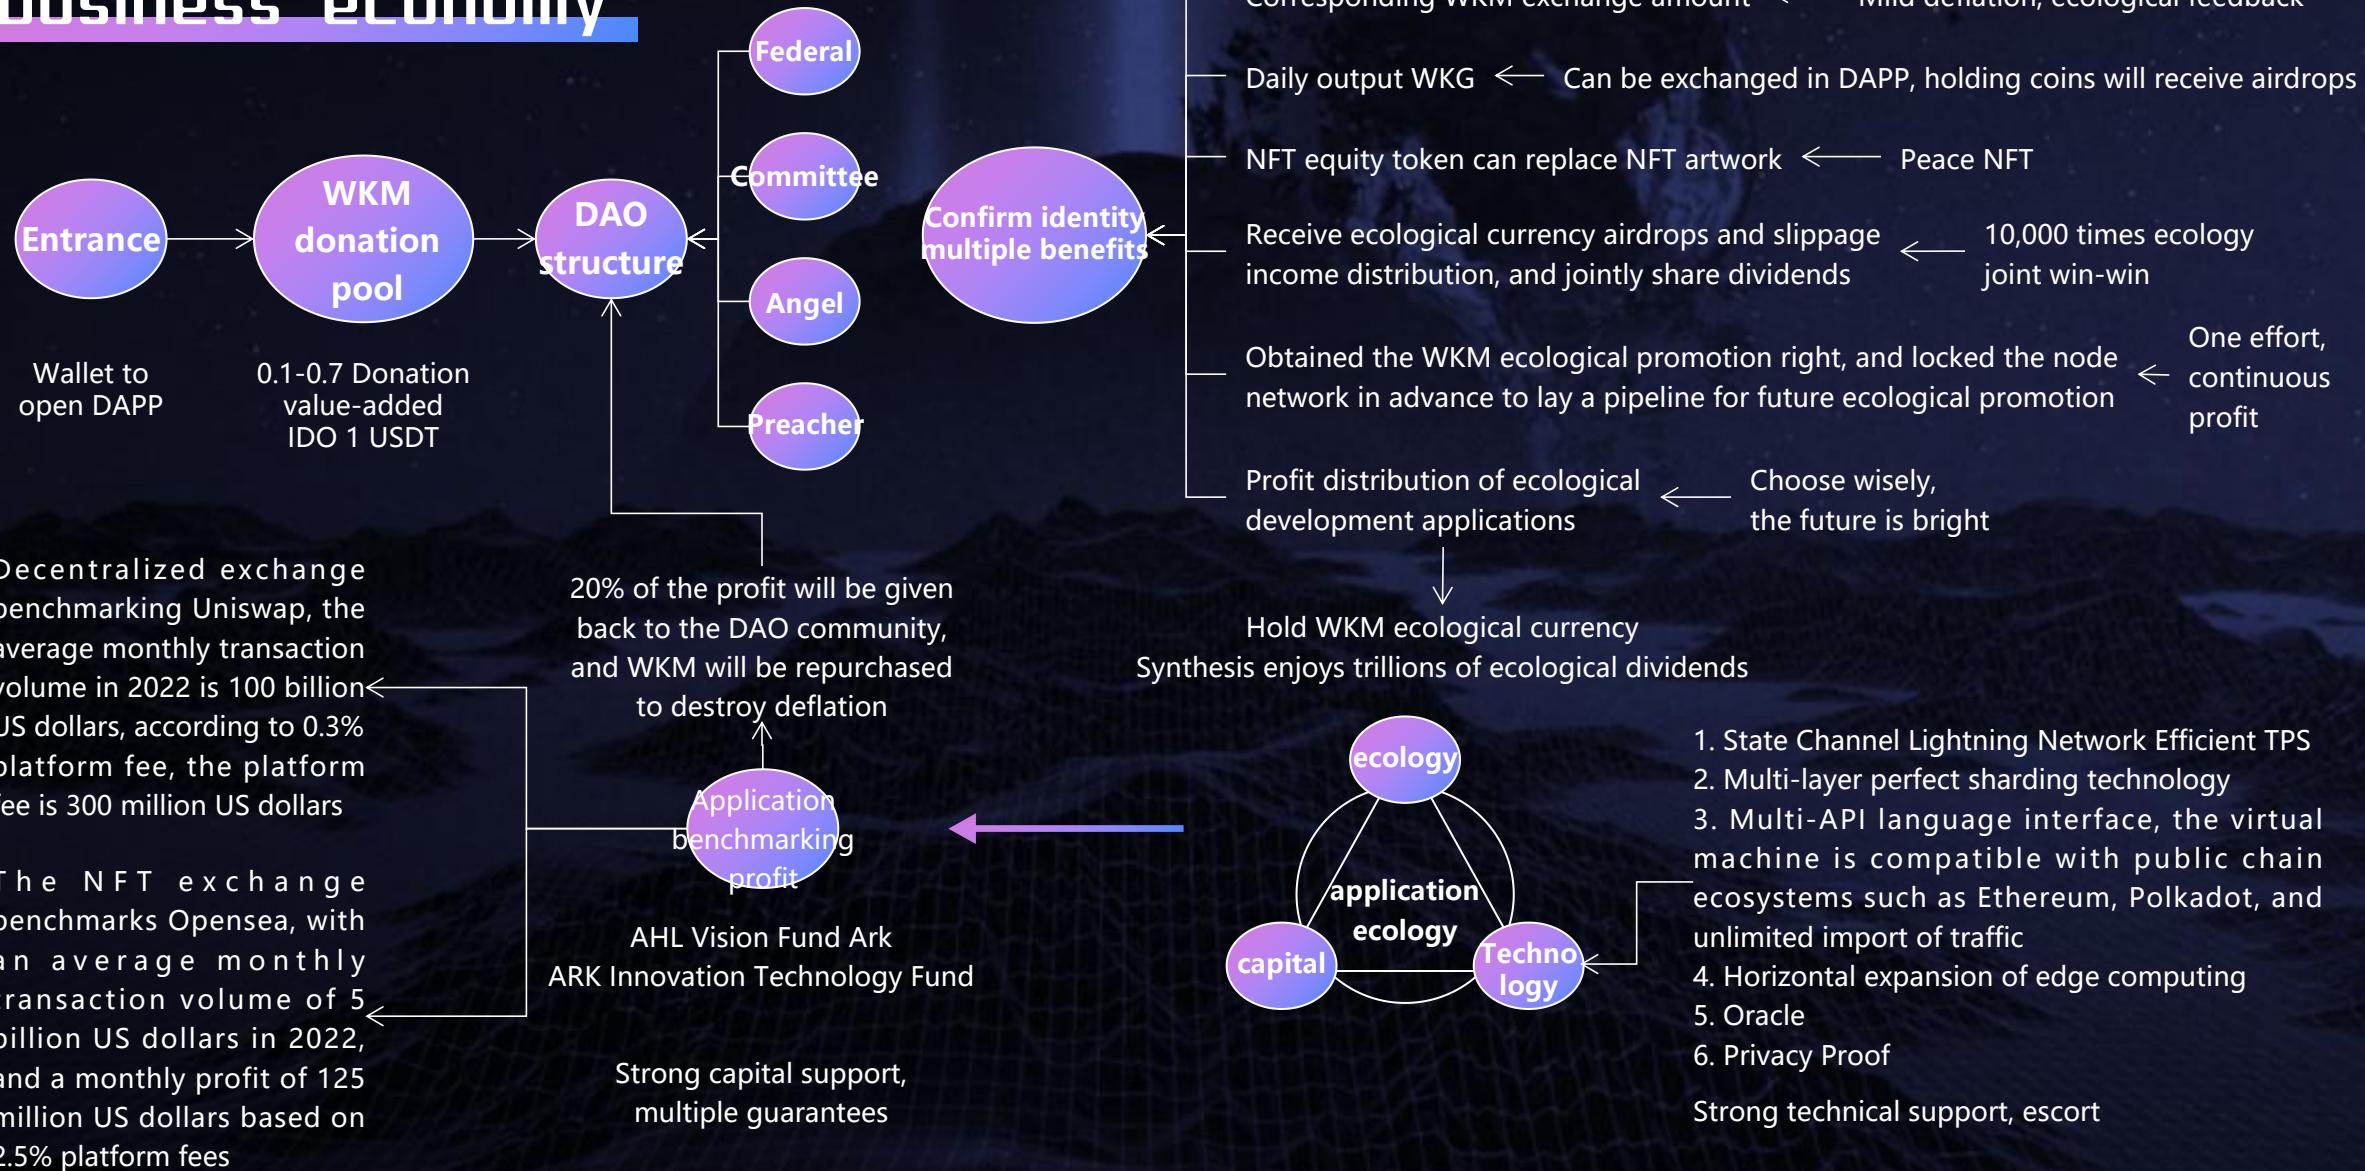

Through the donation pool of 0.1usdt-0.7usdT, the global public offering of ido 1usdt, and the return of donation value-added value, we are looking for community builders who are firmly optimistic about the development vision of Wikimeta DAO.

Ecological application development: centralized exchanges, NFT exchanges, on-chain games, identity verification, lottery centers, decentralized storage, two-layer networks, cross-chain bridges, etc.

20% of the above-mentioned application profit is used to give back to DAO donors and buy back and destroy WKM, which means that holding WKM is an ecological shareholder and enjoys dividend rights. Equal to the initial development stage of Eth, I firmly believe that the ETH ecological development community has become the most original beneficiaries of the Eth ecology such as Opensea (the world's highest transaction volume nft trading platform), Uniswap (decentralized exchange), Sandbox (metaverse game).

**The 10,000 times ecological currency will be airdropped to dao donors on a quarterly basis, and the ecological currency will be jointly provided in the form of a liquidity pool to share the 10,000 times value-added dividends**

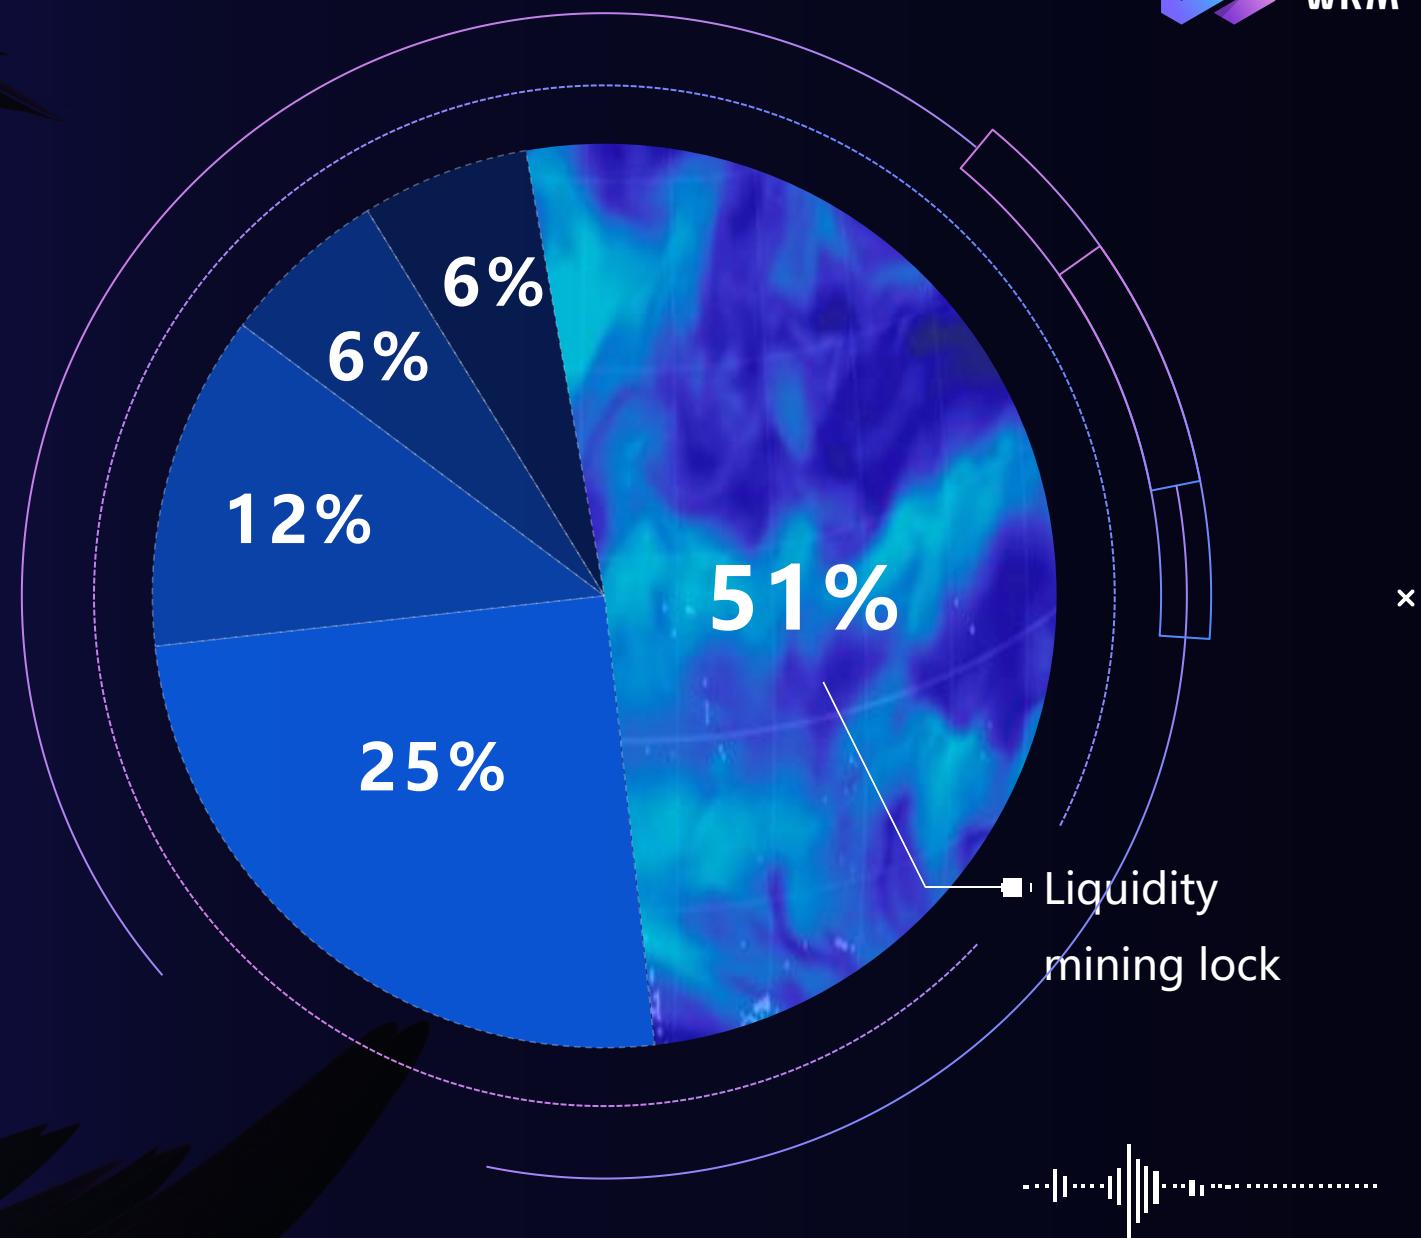

# WKM entry value business economy

# WKM Token Details

Maximum total supply of WKM:  
1,000,000,000

- Liquidity mining locks 51%
- Institutional lock-up for 3 years 6%
- DAO incentive 6%
- Donate to receive 25%
- 12% linear destruction lock for application development (as the number of addresses on the chain increases, the number of application scenarios increases, and it is counted every month and entered into the black hole for destruction)

# Wkm value-added logic currency deflation, application increase

- Ecological development deflation destruction WKM → black hole destruction to continuously reduce the total circulation
- Consensus community invitation model fission, community popularity is high, ecological scenarios increase, profit repurchase WKM currency volume mild deflation
- Ecological value slippage profit repurchase WKM deflation and encourage more ecological currency airdrops by inviting the community, which is equivalent to participating in Ethereum and ecological applications to obtain UNI, ENS (the value of the above-mentioned airdrop ecological currency is more than 10,000 US dollars)
- LP pool combined mining, multi-dimensional value capture such as currency holding time, profit repurchase and WKM destruction. Deflation burns to 100 million WKM
- The ecological profitability is getting stronger and stronger, the greater the community consensus, and the huge value-added space for holding WKM
